Completions | Efficiency

Intelligent Frac Fluid Delivery

Reduce risk

Remove people and activities from the red zone

Reinforce your digitalized workflows with safety interlocks

Eliminate cut wireline

Take automated valve greasing off the critical path

Elevate frac job performance

Precisely control valves and orchestrate your pad with digitalization and automation

Stay informed with real-time data and performance advisories

Minimize nonproductive time

Gain full operational integrity

Collaborate across service teams to standardize

Verify valve positions in real time

Replace manual variability with automated consistency

Boost sustainability

Operate with greater continuity to cut pump idle time and emissions

Automate valve greasing to improve equipment reliability and minimize HSE exposure

Reduce the number of HPUs required to lessen diesel usage and carbon emissions by 60% to 70%

Completions | Digital
