DRY LUBRICANT PART # NDT11D

- Flashes off quickly to leave no sticky residue that can collect dirt and debris.
- Dries FAST to prevent the collection of dirt and dust.
- Moisture-displacing film evaporates away leaving thin dry film of Nano lubricants.
- Ozone friendly - CFC and tricholethane free.
- Penetrates deeply to break friction points allowing mechanical components to move or slide easily.
- Part # NDT11D Aerosol Dry Lubricant.

Works great on garage doors, RV slide-outs, truck hinges, gears, oven chains, motorcycle or bicycle chains, ignition, motors, firearms, reciprocating sliding mechanisms and window tracks.

Perfect for use in aviation, industrial, manufacturing, trucking, automotive, racing, marine and other mechanical equipment, chains or sliding components where high performance dust & dirt-free lubrication is required.

Part # NDT11D

Nano Pro MT Aerosol Dry Lubricant is a precision-engineered solution, combining Dry Lube with CERFLON and proprietary nanomaterials, suspended in a rapid-evaporating fluid. Unlike oil-based lubricants that can squeeze out, NDT11D remains in place, making it ideal for applications requiring reciprocating motion, such as gear and dust-free chain lubrication. Its advanced nanomaterials reduce friction and wear, preventing fretting and galling, even under extreme pressure and high-temperature conditions. Free from CFCs and 1,1,1-Trichloroethane, this fast-drying lubricant does not attract dust or dirt, leaves no oily residue, delivering immediate dust-free lubrication & long-lasting protection.
