

## OIL & GAS APPLICATIONS

**Envirocleanse A Anolyte Solution is a powerful disinfectant-biocide that is environmentally friendly, nontoxic, nonflammable and completely biodegradable. EPA registered and FDA approved.**

Protect your production and injection wells, pipelines and frac fluids.

- **Sulfide & H<sub>2</sub>S Control** to reduce the risk of H<sub>2</sub>S gas, poor hydrocarbon quality, and fouling of production equipment, helping to improve system performance, minimize downtime, and eliminate unnecessary expenses.
- **Completion Fluids** for tank treatments during the fracturing process.
- **Injection Wells** to protect your well against souring, corrosion and plugging as a result of bacterial contamination help manage well pressures and maintain high injectivity.

- **Pipeline & Production Systems** for effective mitigation of both sulfate reducing bacteria (SRB) and acid producing bacteria (APB) which helps protect against system fouling, under-deposit corrosion and generation of H<sub>2</sub>S gas .
- **Fluid Storage** where fresh, flow back and produced water can grow microorganisms that may be harmful to operations and health. Environmentally friendly options are preferred for stored water bacterial management.
- **Risk Reduction** the use of safe to handle chemicals is an imperative considering most Pumpers who maintain the well and the guys who treat them for Production benefits are almost always alone when working. Decreasing their exposure to dangerous chemicals while working in remote locations alone is priceless.

**These things all lead to cost increase in the repair of separators, tanks, flow iron, as well as pipeline repairs.**
